

JOHN MEYERIN

patrick.meyerin@gmail.com | <https://citizenabacus.com> | <https://LinkedIn.com/in/pjmii>

Experienced Software Engineer with a strong background in Java and microservice development, including recent work on scalable back-end and full-stack solutions using Spring Boot and Kafka. These solutions have come in the form of company-hosted, cloud, and Software-as-a-Service productions.

TECHNICAL SKILLS

- **Web Services & Web Application Software Systems:** Spring Boot, Micronaut
- **Software Development Methodologies:** Object-Oriented Analysis and Design (OOAD), Unified Modeling Language (UML), Design Patterns, Agile, Test-driven development (TDD), Service-oriented architecture (SOA), Extensive training in Object-Oriented Technologies through military technical training and formal education
- **Software Development Languages and Tools:** IntelliJ, Sun NetBeans, Java Platform (J2EE/JEE/Java EE/Jakarta EE)/Kotlin, Web Services, Microservices, Java/Kotlin, Javascript, React.js, Node.js, NPM, Reactive programming (e.g. RxJava), PHP, Typescript, Angular2, Junit, Cucumber test suite, Spocktest framework, Kubernetes, Docker
- **Operating Systems:** Unix/Linux(Ubuntu), Microsoft Windows
- **Database:** JDBC, MS SQL Server 2008 R2, Management Studio (SSMS) (2 years), PostgreSQL, Oracle SQL, MySQL, NoSQL (MongoDB, Cassandra, Redis), JPA/Hibernate
- **Messaging:** Java Message Service, RabbitMQ, Kafka
- **Code management/Versioning:** Git/Github, Azure Repos, TortoiseSVN, BitBucket
- **Web Development:** OAuth2/OpenID, Microservices, Spring Boot, Micronaut, RESTFUL APIs, API Gateways, OpenAPI/Swagger
- **Build/CI/CD:** Jenkins, Maven, Splunk, Github Actions, Gradle

EXPERIENCE

AUG 2023 –

Citizen Abacus | St Louis, MO

Software Engineer

- We are developing a distributed social network intended to function as a protocol rather than a platform, allowing anyone to host a node without relying on major platforms to stay in contact with friends and family

- We are developing a digital resume to allow applicants to show their skills in a searchable platform

Dec 2023 – Dec2024

Mastercard | O'Fallon, MO

Software Engineer

- We were using Swagger to generate OpenAPI documentation. This OpenAPI documentation was then fed into CodeGen to make generated classes for QA's automated tests. An update broke this process, causing some fields to not be read correctly, stumping both QA and the team lead. I was able to identify a mismatch in dependencies that was causing some fields to not be serialized correctly by Jackson and implemented a fix that allowed QA to return to full capacity.
- We encountered a requirements issue where some users were submitting data into a plaintext field intended to be a list separated by a special character. The field was intended to allow comma-separated lists, but not every customer used commas as the separation character. This was further complicated because a character one customer used as a list separator would be a valid part of an entry for another customer. Rather than simply barring these special characters I was able to convince the product owner to let me implement warnings in the UI that would reduce confusion for the customers.
- I took on the burden of updating the team's entire microservice ecosystem to Java 17 and Spring Boot 3.x. This involved not only updating the Spring Boot versions, but also a series of third party dependencies and internal corporate dependencies and a blessedly small amount of code changes.
- Led the development of an Angular UI component to warn users when their input to a certain field may not match our desired format and thus result in unexpected behavior for the customer

Practical results include

- Developed benefits tracking tools using OpenAPI/Swagger and Oracle SQL, enhancing customer service efficiency
- Created systems using Spring Boot and Angular that enabled business partners to design rewards programs more efficiently

MAR 2015 – JUL 2023

Object Computing Inc | St Louis, MO

Microservices engineer, groovy, grails, and micronaut team

- Established a Spring Boot microservice ecosystem using Java messaging for inter-communication and PostgreSQL for data management, enabling efficient tracking of sales of point-of-sale systems
- Implemented a scalable Micronaut web-service back-end using Java, leveraging technologies such as RxJava for concurrency, JPA, Hibernate, JOOQ, and KQL for data management, and JMS and Kafka for messaging, enhancing system performance and reliability
- Designed usable and interactive front-ends using React.js, Vue.js, and Angular2/Angular 13, improving user engagement and interface accessibility
- Developed responsive and efficient Java embedded systems using Micronaut for dependency injection and inversion-of-control, optimizing system performance and resource management
- Created systems utilizing full OAuth2 flow including OpenID for SSO, in accordance with OWASP guidelines, ensuring secure and seamless user authentication
- Designed high-coverage and demonstrative testing using JUnit, Mockito, and the Spock test framework, improving code reliability and reducing bugs

- Planned microservice ecosystems using Infrastructure-as-code techniques and tools such as Consul and Docker containerization, enhancing deployment efficiency and scalability
- Created both RESTful APIs and SOAP APIs, utilizing full domain modeling to ensure comprehensive data representation and integration
- Interfaced with AWS, Azure, and GCP cloud systems to optimize cloud resource management and improve system performance

Practical results include

- Developed systems for tracking sales of point-of-sale devices using Java Message Service, improving transaction accuracy and efficiency
- Created OCI-internal tools for tracking professional development using Typescript, enhancing employee growth monitoring and reporting
- Developed embedded software for medical diagnostic tools using Object-Oriented Analysis and Design, enhancing diagnostic accuracy and reliability
- Implemented ACH payment processing software using JDBC, streamlining payment transactions and reducing processing time

AUG 2014 – FEB 2015

Wellpoint | Wallingford, CT

Software Engineer

Primary Duties and Responsibilities

- Developed Java applications for the middle-tier aggregation layer using Java Server Pages (JSP) and Redis, improving data processing efficiency

Additional Duties

- Created build scripts using Gradle to streamline the software deployment process, improving efficiency and reducing errors
- Developed and executed database scripts using Management Studio (SSMS) to optimize data retrieval and enhance system performance

Skills used

- Developed microservices using Java and Spring Boot, enhancing application performance and scalability by implementing test-driven development (TDD) practices

MAY 2013 – JUL 2014

SAIC | Scott AFB, IL

Software Engineer

Primary Duties and Responsibilities

- Developed Java applications for UI and web services using IntelliJ, enhancing user experience and service reliability
- Conducted testing and validation using Node.js and JavaScript, ensuring software quality and performance

Additional Duties

- Created build scripts using Java and Kotlin, improving deployment efficiency
- Developed database scripts using Node.js and Typescript, enhancing data management processes

Accomplishments

- Completed over 50 individual task items using Test-driven development (TDD) and Maven, improving project efficiency and code quality
- Resolved versioning issues in the deployment environment using Azure Repos, ensuring timely releases and minimizing downtime

Skills used

- Developed web applications using Java, SQL, and Vaadin, enhancing user interface with HTML5 and CSS3, which improved user engagement and system performance

NOV 2003 - MAY 2011

375 Communications Support Squadron | Scott AFB, IL

Application Development Supervisor

Primary Duties and Responsibilities

- Led and mentored team members, providing guidance and support to enhance their skills and performance
- Served as liaison with customers, facilitating communication to ensure project requirements were met effectively
- Oversaw project development throughout its life cycle, ensuring timely delivery and adherence to quality standards
- Conducted training sessions for junior developers, enhancing their proficiency in Java and JavaScript
- Led development projects as both manager and coder, utilizing Java, JavaServer Pages, HTML, JavaScript, and ColdFusion to deliver robust applications

Additional Duties

- Provided command and control support using Agile methodologies during installation command contingencies, ensuring seamless communication and operational efficiency
- Performed military honors at funerals and events, demonstrating respect and professionalism, which enhanced the ceremonial experience for attendees
- Assisted Security Forces in preventing unauthorized access to the base by implementing strategic security measures and utilizing Redis for efficient data management

Accomplishments

- Identified inefficiency in event planning process, created automated solution that saved leaders an estimated 100 hours per month
- Spearheaded overhaul of Base Honor Guard's record management, updating the automated system to be both more user friendly and to comply with Privacy Act guidelines
- Created networked software solution for tracking network and communication maintenance work,
- streamlining logging of hundreds of maintenance actions
- Fortified ECM systems; eliminating high failure rate, provide vital convoy safety measures

Skills used

- Developed and maintained applications using JavaScript, Java, HTML, SQL, JavaServer Pages, Tomcat, Struts, and ColdFusion, enhancing system performance and user experience

EDUCATION

BS Computer Science 2013

BA Mathematics 2013

Mckendree University GPA – 3.2/4.0

- **Achievements:** Studied organization and architecture of computers. Used this to create single-operation processor using 4300-series logic gates and a breadboard, Studied software networking, including network security. Leveraged this knowledge to lead team in creation of proxy server software, Studied structure and design of compilers. Created compiler for made-up programming language, Senior Project: Training neural net AIs via an analog of natural selection creation of proxy server software, Studied structure and design of compilers. Created compiler for made-up programming language, Senior Project: Training neural net AIs via an analog of natural selection
- **Coursework:** organization and architecture of computers, software networking, including network security, structure and design of compiler
